

MonaLisa Touch™

The New Laser Treatment Against Vaginal Atrophy, Laxity and Urinary Incontinence

Do you suffer from vaginal discomfort

Vaginal discomforts such as dryness, burning, urinary incontinence can occur during pre-menopause or after child birth. The main cause is often atrophic vaginitis a disease that can adversely affect your life and the relationship with your partner.

Now it is possible with no pain, no side effects and in just few minutes, MonaLisa Touch is a painless and minimally invasive laser treatment for vaginal rejuvenation. By gently acting on tissue of the vaginal mucosa, the laser stimulates the production of collagen, improving the functionality of the treated area and restoring the proper trophic balance to the mucous membrane.

**Stimulates
Regenerates
Restores
Your Body's Natural balance
and Functions**

- **Dryness & Loss of Lubrication**
- **Postpartum Pain & Discomfort**

Vaginal discomfort:

Problems that often are neglected, which have a significant impact of the quality of life

THE MISSING SOLUTION TO POSTPARTUM INTIMATE PROBLEMS

Postpartum sexuality is an important part of women's health. Many women commonly experience postpartum sexual problems such as dyspareunia due to lactational atrophic vaginitis or following perineal trauma. Painful sexual intercourse is the most common sexual problem for puerperae and represents both a physical and psychological problem for many women and their partners

Today, thanks to the capabilities of MonaLisa Touch to stimulate tissue regeneration, it is now possible to resolve these situations delicately and safely.

PAINLESS EFFECTIVE NON INVASIVE NON SURGICAL NON HORMONAL LONG LASTING

A revolutionary solution that creates long lasting results stimulating your body's natural regeneration processes.

MonaLisa Touch is a non-surgical, non-hormonal alternative to hormone therapy (HRT) for the treatment of symptoms related to Vaginal Atrophy. It is a five minute, pain free procedure that has no downtime.

MonaLisa Touch laser is the first solution that designed to naturally counteract the effects of the vaginal mucosa. By stimulating the regeneration of new vaginal tissue MonaLisa Touch restores your body's natural balance and function. You can begin to feel like you again and rediscover the confidence and live the lifestyle you choose.

HOW MONALISA TOUCH WORKS TO RESTORE FUNCTION AND BALANCE

MonaLisa Touch Laser works by stimulating the body's own regenerative processes to create more hydrated and healthy cells and improve the circulation and nutrient supply to the vaginal mucosa. This has a direct effect on the integrity elasticity of the vaginal wall and returns the internal vaginal environment to more normal levels. In as little as 30 days after first treatment the regeneration of new tissue in the vaginal wall builds a naturally stronger structure and the protective mucosa recovers volume hydration elasticity. MonaLisa Touch Laser treatment takes around ten minutes. There is no downtime required after the treatment and you can return to your normal activities immediately.

How Many Treatments Are Required?

Most patients feel an improvement after the first treatment with the full benefits of the MonaLisa Touch Laser treatment achieved in three to four treatments. This can be decided in consultation with your Doctor.

Are The Results Permanent?

All the changes obtained with the MonaLisa Touch procedure last significantly longer than other treatment options. As the natural ageing process continues the treatment can be repeated as required.
